

Folder Structure / Organizing Your Code

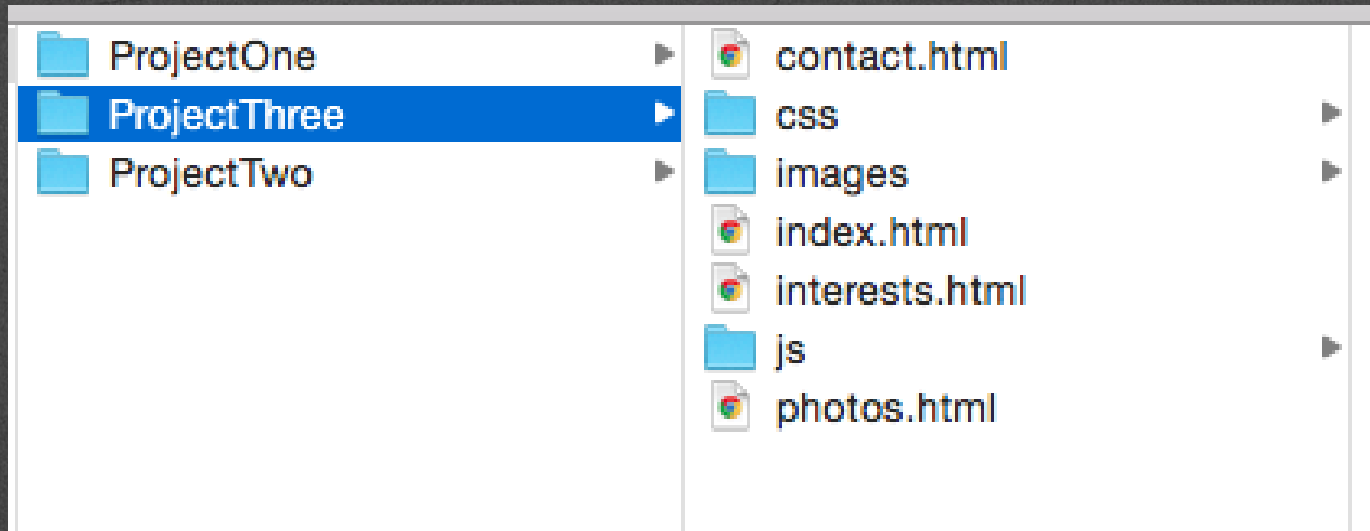

Folder Structure

- Web Developers tend to organize their code into separate parts
 - HTML
 - CSS
 - Images
 - JavaScript

Conventions

- Organizing your code is a convention, not a rule

Linking from an HTML file

```
<link rel="stylesheet" href="css/style.css">  
<script "js/javaFunctions.js"></script>  
<img src = "images/myPicture.jpg"/>
```

Linking from a CSS file

```
background: url("../images/holiday.png");
```

Debugging

- If a link isn't working you want to check a few things:
 - Did you spell the file names correctly? (Case matters!!)
 - Are files in the correct folder?
 - Are you working on the correct file?
