

Validating Your Site

Check your code!

Why validate?

- **Browsers are the helicopter parents of programming**
- **As your pages become more complex “hidden” areas can be devastating**

Three approaches

- **Validate by URI**
- **Validate by Filename**
- **Validate by Direct Input**

Don't freak out!

- **Errors propagate, so always start at the top**
- **Search for solutions online and in forums**

Accessibility Validation

- You can use wave.webaim.org to validate accessibility
- Only works on hosted pages

Review

- **Validated sites are more robust and more accessible**
