

# Checkboxes and Radio Buttons

# New input types

- Fields for name, email, etc. are fairly straightforward
- Additional form fields you will want to look at include checkboxes and radio buttons

# Checkboxes

- Typically shaped as squares
- Allow the user to select options with a single click
- Options share a single name

JS – Easy Checkbox

## Radio Buttons

- Typically shaped as circles
- Just like checkboxes, radio buttons allow users an easy “click it” interface
- However, radio buttons only allow you to select one option per group

JS – Easy Radio Button

# JavaScript

- When using JavaScript on checkboxes and radio buttons, the boolean expression is usually on the **checked** attribute

JS – Checkbox Example

# Review

- The purpose of forms is to allow user an easy way to interact with the page
- Checkboxes are commonly used to trigger events on a page
- You can't fully implement forms unless you learn backend programming as well
